

# HCL Sametime Premium

Your meeting. Your data. Double the value.

HCL Sametime is what complex industries and government entities use to ensure their most important communications are secure. It's a proven and trusted persistent chat and video meetings platform, rebuilt for how today's modern organizations need to be working — nimbly, securely, and remotely — all while reducing your operational costs.

Capabilities	Benefits	Value
Rock-solid data privacy, encryption and auditability.	Your data and conversations protected — in private cloud or on-premises.	No time- and money-wasting data breaches. You can establish the security policies and deployment options required for your business.
Instant meetings and chat with one click. No waiting.	You're only seconds away from secure team chat, video meetings, and file sharing. No installation required and no need to wait for a SaaS solution.	Efficient and instant meetings mean no time or overhead is wasted in joining every meeting, every day.
Strong meeting controls.	Moderators and presenters can control muting and presenting — as well as require passwords.	Sleek and intuitive, and meets all industry standards of a modern meetings and chat solution.
Work from anywhere using any device at home, on the road or offline.	Working from home, in an office, or on the road — secure chat that never goes down.	Your teams can interact and react quickly, improving business outcomes faster.
Deploy on a secure private cloud or on-premises.	Faster deployment with containers and scale with Kubernetes; simpler installs and fewer servers.	Automation saves on configuration and administration time, saving time and lowering TCO.
You are able to reach millions with live organizational events.	Broadcast meetings as streaming video and reach an unlimited audience in a YouTube channel you control.	With one click, share your town hall meetings, business updates, and trainings with employees, customers, and partners.
Never lose an action item after the video meeting has ended.	Teams can chat and talk without losing the context of the conversation — before, during, and after a meeting.	With persistent meeting chat and a video recording, everyone stays updated after the call has ended.
Set admin policies and manage resources in minutes.	It's easy to define which groups can do what — this increases security, manages network bandwidth, and protects confidentiality.	Regulated or risk-averse enterprises have more supervision and control over data privacy and resources.
